### ***DETAILED ACTION***

Claims 1-18 have been cancelled. Therefore, claims 18 and 19 are currently pending in this application.

#### ***Priority***

This Application is a divisional of US Application Serial No. 09/309,464, filed May 11, 1999, now US Patent No. 6,673,828 B1 issued January 06, 2004 which claims the benefit of US Provisional Application 60/332,284 filed November 16, 2001.

#### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claim 19 is rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Regarding claim 19, the specification does not give any guidance as to the full range of cancer diseases which could be treated using the instant claimed compound. In *In re Wands*, 8 USPQ2d 1400 (1988), factors to be considered in determining whether a disclosure meets the enablement requirement of 35 U.S.C. § 112, first paragraph, have been described. They are:

1. the nature of the invention,
2. the state of the prior art,
3. the predictability or lack thereof in the art,
4. the amount of direction or guidance present,
5. the presence or absence of working examples,

Art Unit: 1626

6. the breadth of the claims,
7. the quantity of experimentation needed, and
8. the level of the skill in the art.

In the instant case, applicants are claiming a method of treating "tumor". The nature of pharmaceutical arts is that it involves screening *in vitro* and *in vivo* to determine which compounds exhibit the desired pharmacological activities. There is no absolute predictability even in view of the seemingly high level of skill in the art. The existence of these obstacles establishes that the contemporary knowledge in the art would prevent one of ordinary skill in the art from accepting any therapeutic regimen on its face. As defined the compound reads on treating all tumors which is broader than the enabling disclosure. The cancer therapy art remains highly unpredictable, and no example exists for efficacy of a single product against tumors generally. Specifically, Internal Medicine, 4th Edition, Editor-in-Chief Jay Stein, Chapters 71-72, pages 699-715, teaches that the various types of cancers have different causative agents, involve different cellular mechanisms, and, consequently, differ in treatment protocol. It is also known that certain tumors are dependent upon estrogen for their induction or stimulation (e.g. breast tumors) and others are not. See USPs 4605661 and 4916144. Chemotherapeutic agents are frequently useful against a specific type of neoplasm and especially with the unpredictability of the art there are no drugs broadly effective against all forms of cancer. (Carter, S. K. et al. Chemotherapy of Cancer; Second edition; John Wiley & Sons : New York, 1981; appendix C). The compounds which are disclosed in the specification have no pharmacological data regarding the treatment of specific types of cancer or tumors. It is suggested to that the claim be limited to the specific cancer diseases contemplated in the specification.

***Allowable Subject Matter***

Art Unit: 1626

Claim 18 is allowable over the prior art of record.
